**CONSTANT-TEMP™ INCREASES POWER, ENHANCES PERFORMANCE
AND PROVIDES REDUNDANCY**

Dallas, TX (May 5, 2007) – National Hot Water announces the release of the **Constant-Temp™ instantaneous water heating auxiliary system**. The system includes a wall mounted instantaneous water heater, bypass piping, pump and Ver-A-Temp™ water temperature sensor.

Constant-Temp™ ensures constant water temperature and hot water volume by supplementing an existing water heating application during peak usage. Using patent-pending Ver-A-Temp™ technology, the Constant-Temp™ system monitors the outgoing water temperature of the main water heating system. In the event of a drop in temperature, Constant-Temp™ automatically adds hot water to the storage tank of the main water heating application using a wall-mounted instantaneous water heater. When the storage tank water regains the correct temperature, Constant-Temp™ automatically powers-down.

In the event of a water heating emergency, Constant-Temp™ is equipped to bypass existing the water heating application and function as a back-up until maintenance can be performed. Plus, the Constant-Temp™ system will automatically alert either the facility staff or National Hot Water's 24/7 Call Center so technicians may be dispatched for troubleshooting and repair.

“Constant-Temp™ is an affordable way to add more water heating power and increase the system performance, without sacrificing extra floor space,” says Randy Meyer, vice president of national accounts for National Hot Water. “And the redundancy of having a back-up system to keep a facility running gives extra peace-of-mind,” says Meyer.

Constant-Temp's™ small profile makes it feasible for retrofit into existing applications especially in restaurant, hotels, or motels where peak usage has become a struggle for the existing tank-type or boiler application, or redundancy of equipment is necessary to ensure facility operation in the event of water-heating emergency.

National Hot Water, the national account division of National Wholesale Supply, Inc., provides sales, service and technical support for water heating applications, customized water softening solutions, water filtration equipment, geothermal systems, ac/dehumidification systems and more. With the industry's largest nationwide network of certified plumbing/HVAC contractors, National Hot Water

provides coast to coast, 24/7 service to handle emergency repairs and replacement, scheduled maintenance and new installation for the restaurant, hotel/motel and healthcare industries. Call toll-free 888-444-4435 for more information.
